

What is claimed is:

1. An image capturing apparatus comprising:
 - a first display capable of electrically displaying a captured image;
 - 5 a second display capable of electrically displaying a captured image; and
 - a controller for simultaneously causing said first display to display said captured image and said second display to display information different from said captured image.
- 10 2. The image capturing apparatus according to claim 1,
 - wherein said second display simultaneously displays said information and said captured image.
- 15 3. The image capturing apparatus according to claim 1, further comprising
 - a selector for selectively turning on/off display on said first and second displays.
- 20 4. The image capturing apparatus according to claim 3,
 - wherein at least one of said first and second displays displays an image preceding an image to be actually shot.
5. The image capturing apparatus according to claim 1,
 - wherein said information includes information about a setting in a shooting mode.

6. The image capturing apparatus according to claim 1,
wherein said information includes information about said captured image
having been subjected to image correction.

5 7. The image capturing apparatus according to claim 6,
wherein said information includes a correctable item associated with said image
correction, and information about a setting of said correctable item.

10 8. The image capturing apparatus according to claim 6,
wherein said controller forces said first display to turn on when performing said
image correction.

15 9. The image capturing apparatus according to claim 1,
wherein said information includes additional information about said captured
image.

20 10. The image capturing apparatus according to claim 9,
wherein said additional information includes a histogram regarding exposure of
said captured image.

 11. The image capturing apparatus according to claim 10,
wherein said histogram is displayed immediately after shooting.

25 12. The image capturing apparatus according to claim 9,
wherein said additional information includes information recorded at the time

of shooting.

13. A method of display control in an image capturing apparatus including a first display and a second display both capable of electrically displaying a captured image, said method comprising:

displaying a captured image on said first display; and

displaying information different from said captured image on said second display at the same time that said captured image is displayed on said first display.
